

PROJECT OVERVIEW

The Honolulu Board of Water Supply has an agreement with Kalaeloa Desalco LLC to construct, operate and maintain a seawater desalination facility in Campbell Industrial Park that will produce 1.7 million gallons of fresh water daily for Campbell Industrial Park.

The Kalaeloa Seawater Desalination facility will provide a high-quality local water supply that is drought-proof, sustainable, enhances water resilience to climate change, and reduces water transfers from Central O'ahu.

The new Kalaeloa Seawater Desalination Facility will include space for visitors available to the community.
